Hi!
I hope you all had a great summer! Here at HIC, we have started the autumn with participating in the 15th World Congress on health and biomedical informatics (MEDINFO 2015). Sabine Koch, Maria Hägglund, Nadim Anani and I from HIC had contributions in the conference in Sao Paulo in August. You can read more about our contributions in the conference proceedings, available online.

For my own part, I presented a poster "Care Professionals' perceived usefulness of a rehabilitation eHealth services in stroke care" where medical personals perceived usefulness of an online care and rehabilitation systems have been studied based on the Unified Theory of Acceptance and Use of Technology (UTAUT). At the end of this newsletter there is a picture of me and Maria Hägglund next to our poster in MEDINFO 2015.

During the last week of August, we welcomed new students in our international Master's programme in Health Informatics and we wish them all the best in their studies during the next two years. We also welcomed our new colleague Therese Scott Duncan who will mainly work with a research project called IntegrIT where effective tools for collecting and processing data to the clinical studies will be developed.

There will be more conferences for HIC members in September and October. Maria Hägglund and Sara Riggare will participate in MedicineX in Stanford and Aboozar Eghdam will represent HIC in IEEE international Conference on Healthcare Informatics (ICHI 2015) in Dallas. Aboozar’s presentation will be about the use of e-services and social media by persons with MACI "How do persons with Acquired Mild Cognitive Impairment use e-services and social media? Results from a Swedish national survey".

You are welcome to participate in our seminars this autumn and I hope to see you at our upcoming seminar by Anja Perlich about "Tele-Board MED Interactive Medical Documentation".

Tele-Board MED – Interactive Medical Documentation

Speaker: Anja Perlich, M.Sc., Doktorand, Hasso-Plattner-Institut für Softwaresystemtechnik GmbH, Potsdam
When and where: Tuesday 22 September 2015 at 2-3.30 pm; Karolinska Institutet, LIME, the Widerström building. Tomtebodavägen 18A, floor 3, room ENGAGE

The first step in the process of patient empowerment is considered access to information – so why not include the patient in the creation of information? In the research project Tele-Board MED we investigate how medical documentation can be turned from a necessity taken care of by the doctor, into a task that supports the patient’s recovery. Stepping away from hand-written notes by the doctor to joint digital documentation on an interactive whiteboard raises questions regarding data transparency and the patient-doctor relationship. I would like to share intermediate results and experiences gathered in the domain of behavior psychotherapy.

Upcoming meetings and conferences

Digital Health Days 23-24 September 2015, Stockholm, Sweden
MedicineX 27-29 September 2015, Stanford, USA
MedicinTeknikdagarna, 13-14 October 2015, Uppsala, Sweden
IEEE International Conference on Healthcare Informatics 2015 (ICHI 2015), 21-23 October 2015, Dallas, USA
Informationskonferens Dagar om lags, 5-6 November 2015, Gothenburg, Sweden
Nordic Mobile Healthcare Technology Congress 2015, 11-12 November 2015, Stockholm, Sweden
HEALTHINF2016, 21-23 February 2016, Rome, Italy
