A research project:

Life situation and return to work after breast cancer surgery – a prospective cohort study

The aim of this interdisciplinary research project is to gain knowledge on factors that hinder and promote return to work among women who have had breast cancer surgery and on how sickness absence influences their quality of life and health.

Breast cancer is the most common cancer diagnosis in women. Since almost 90% of the women survive more than five years, but may suffer from remaining symptoms from treatment and disease, research focusing on consequences for their life situation, are needed. So far, few studies have been conducted concerning factors of importance for (return to) work.

In this prospective cohort study, 750 women, 23-63 years old, who lived in Stockholm and had breast cancer surgery, were followed up for two years. A wide spectrum of data have been collected, via six repeated and comprehensive questionnaires, focus group interviews, different registers, and medical records. The women were included in 2007 to 2009.

Results will be used as basis for interventions. Since knowledge is sparse, this extensive data collection is carried out as a first step. The study also offers a unique opportunity to evaluate the recent national “guidelines for sick leave due to breast cancer”, since inclusion started before the introduction. The results may also serve as basis for training of professionals in health care, social security, and work sites.

Also other types of data sources have been used in some of the studies listed below.

Project group

Kristina Alexanderson	Professor, PhD, <i>project leader</i>
Emilie Friberg	Associate professor
Kerstin Nilsson	Statistician
Agneta Wennman-Larsen	Associate Professor, PhD RN, <i>assistant project leader</i>

Cooperation

We collaborate with other research groups, e.g., in national projects with patients with hematology diseases and kidney transplantation. We also collaborate with research groups in Belgium and the Netherlands, where corresponding projects are ongoing.

Financing

Financing has been obtained from the Swedish Research Council for Health, Working Life and Welfare, the Swedish Research Council, the Stockholm County Council, the Swedish Cancer Society, the Cancer and Traffic Injury Found, Radiumhemmets forskningsfonder, The Swedish Breast Cancer Association (BRO), the Health Care Science Post-Graduate School of Karolinska Institutet and Cost.

Publications in the project
