

Import with recommended quarantine

1. Based on the decision of the receiving facility that the mice have to be placed in quarantine, the researcher will be contacted by Import Portal for planning of animal delivery
2. The researcher orders/request the animals and is legally responsible for the transport (researchers name and phone number must be on transport documents)
3. The researcher in collaboration with Import Portal organizes the transport to Import Portal
4. The manager of Import Portal coordinates the health monitoring
5. The manager of Import Portal informs the researcher about the health monitoring results (email to the receiving facility veterinarian, the receiving animal facility)
6. The receiving animal facility veterinarian needs to approve the health report and gives the ok to receive the animals (email to researcher and Import Portal)
7. The transport to the animal facility is arranged by the receiving facility in collaboration with the personnel from Import Portal
8. The receiving facility informs the researcher about the transport and that the animals arrived at the facility.
