

Dear all,

Here is my monthly letter as a delegate for the Environment & Sustainable development at Onc-Pat.

[KI Sustainability Day 2021, May 18 | Karolinska Institutet](#) has been an inspiring event for all of us who want to contribute to the Sustainable Development Goals. Visit this page to learn more about [Sustainable development | Karolinska Institutet \(ki.se\)](#)

WASTE – is my theme for May, and I have earlier provided you with some short info on what becomes from the waste items after we sorted them properly.

Here are three challenges for us to address in the nearest future:

As for now, these are destined to get burned. Place in the green bag for burnable waste.

These are over-packed! Brown paper goes in the packaging material bag.

Take a new bag and send the filled one to the recycling.

Let's convince the companies start reusing both the cooling containers and the styrofoam boxes! They should take action for our planet!

Flatten the packaging and fill the bags tightly not to transport the air!

Recycle hard plastic by filling the bags for plastic and sending them for recycling

Watch our [QR-code-video on recycling in Bioclinicum!](#)

Our motto: We can make a difference!

I'll be back! Katja
