

SRP Diabetes International Seminar

“Plasticity of human skeletal muscle and the myotendinous junction”

Abigail Mackey

Clinical Professor of Muscle
Physiology and Regeneration,
*Institute of Sports Medicine, University
of Copenhagen*

The overall aim of the Mackey group is to understand how muscle force are affected during the ageing process, and how physical activity can help to slow some of the decline. Her group study the muscle-nerve communication and how exercise maintains this to preserve physical function in old age. They also investigates the human myotendinous junction in intact and injured states to understand its molecular makeup.

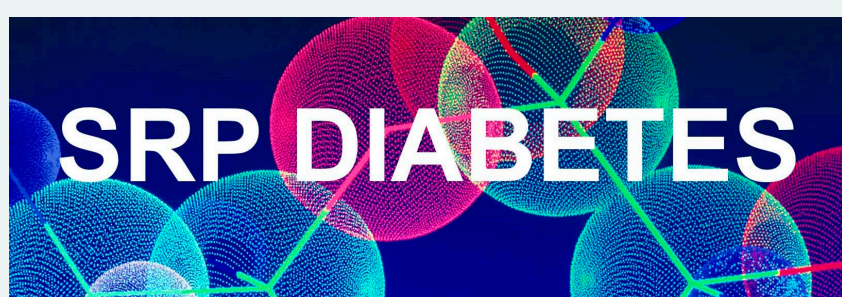

There is a mingle with light refreshments after the seminar to which you need to register latest Wednesday October 9 to arja.kants@ki.se

Host: Ferdinand von Walden / SRP Diabetes

Monday 14 October 2024 | 16:00-17:00

Peter Reichard room, Biomedicum, Solnavägen 9, Solna
