This course has fulfilled my expectations of a high quality course.	4.9	0.4	7.2 %	4.0	5.0	5.0	5.0	5.0

16. Were there any parts of the course that were excellent? If so, please specify which parts and in what way.

Were there any parts of the course that were excellent? If so, please specify which parts and in what way.

All the lectures, the way all concepts were clearly explained.

Several parts of the course were excellent, especially the personalized feedback, which made the learning experience feel tailored and supportive. The workshops with other students were also very helpful, as they encouraged collaboration and created an environment where everyone tried to help one another, making the experience more interactive and enriching. Additionally, the lectures had very strong content that was clearly structured and thoroughly explained without assuming prior knowledge, making everything easy to understand and follow.

The people running the course were very involved; they always solved questions on time and even gave extra time after lectures for discussions. The student workshop was very useful, and the fact that we learned about light microscopy by using our own samples made it easier to understand the learning objectives. Even though there were plenty of quizzes and assignments to complete, they were very useful for consolidating learning in each module. I am very satisfied with the course.

The detailed course content and regular feedback from all the teachers, how the content is applicable to each student's particular microscopy needs

The course is very oriented towards your own project which makes the teachings more practical rather than just theoretical knowledge. You also get a lot of individual feedback on the different assignments which help you improve and learn from mistakes.

The course was exceptional, particularly the Imaging sessions, assignment feedback, and workshops. The concepts were delivered with remarkable clarity, providing a solid theoretical foundation. Most importantly, the instruction was highly tailored to my individual project, offering specific, actionable insights that significantly advanced my research.

The organisation of the content on canvas, time keeping and feedback on our assignments.

The student imaging challenge was incredibly helpful. It allowed us to apply theory directly to our images, with feedback that enabled us to spot other errors.

Very excellent course and amazing teachers with their great contributions to help me refine my imaging skills. With the help of the course, now I have built a solid foundation of microscopy and become more confident with my imaging skills.

all parts of the course were excellent and highly helpful and genuinely interesting.

the course instructors were great! they handed out high quality teaching and timely feedbacks. they were also very understanding with regards to the assignment submissions.

I really enjoyed the colocalization lecture, particularly the fact that little exercises were intertwined with the theoretical knowledge. I also appreciated the detailed feedback that was given through the portfolio assignments, it helped shedding light on parts of the course that were not fully understood and that I had to focus on.

17. Do you have any recommendations as to how the course could be improved? If so, please specify which parts and how.

Do you have any recommendations as to how the course could be improved? If so, please specify which parts and how.

I don't have any i think the course is excellent.

It would be better to know in advance the exact day we need to deliver assignments that require microscopy. Now it is said at the beginning of the course to book the microscope at the end of each week, but it would be better to know the assignment deadlines to know better when to book the microscope.

Overall, I found the course very valuable, but the content felt quite heavy at times, with many new concepts introduced in a short period. Splitting the course into two parts would help participants absorb the material more effectively. This would give us time to practice between sections, consolidate what we've learned, and return with more informed questions.

I would probably make it a bit more flexible in terms of the assignments deadline dates. Working on this course from 9am to 11pm is not very efficient especially when it comes to write and submit assignments.

The course is extremely intense and sometimes requires you to work outside of working hours. However, I don't have specific ideas on how to improve the situation, except making more generous deadlines or keeping the tolerance for late assignments.

Also, the course organizers require communication from students for organization purposes before the course even starts. Therefore, it should take place further away from the Christmas brake. This way, students won't be asked to answer during their vacations.

Publish modules in advance if possible so students can plan their assignment submissions, especially those requiring the use of a microscope

One or two days of the second week became quite heavy with lectures and workshops from 9 to 17 and then assignments with deadline the same evening.. But this was not a problem later on in the course, it was handled nicely and some deadlines were pushed to another day.

I do not have any recommendations for improvement, as the course is very good as it is. The content, organization, and overall structure work very well, and the learning experience has been highly positive.

Maybe let more time after each module to digest the course. Sometin el felt like I understood but finally I didn't.

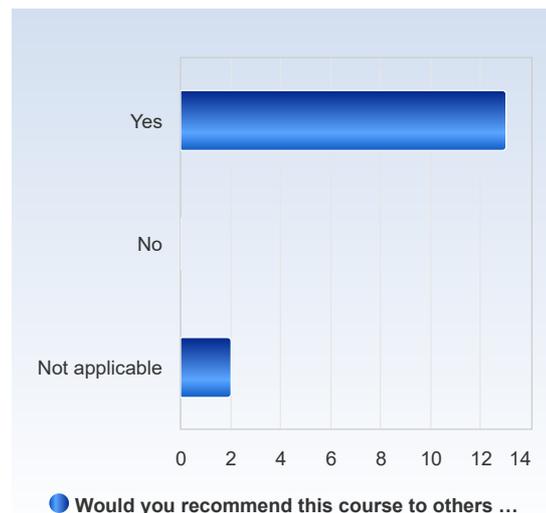

some assignments require prior preparation, it would be great if the instructions were slightly clearer.

The analysis part could be expanded a bit more, including more types of analysis methods. All the rest is perfect.

18. Would you recommend this course to others enrolled in doctoral education? (Answer only if you are a doctoral student, otherwise select the response option "Not applicable")
