Applied Autism  
Research (CAAR)

UNIVERSITY OF  
**BATH**

# Background

- **Concern across Government, Health, Justice**
  - Prevalence, behaviour, legal aspects, police, Courts, prisons, high-secure hospitals; offending and risk
- **Concern from the autistic/autism community**
  - Rights, vulnerability, stigma - 'demonising', victimhood
- **Media interest**
  - Sometimes sympathetic – usually speculative and sensational

# Questions

Q.1. Is autism associated with a higher risk of law breaking?

Q.2. Are autistic people more likely to be victims of crime?

Q.3. What happens to autistic people in the justice system and what might help ?

Q.1  
Is autism  
associated  
with a higher  
risk of law  
breaking?

High profile cases

Prevalence studies

What sort of offences ?

What is it about autism?

High profile  
individuals and the  
reported  
association of  
autism and crime

# Adam Lanza

Saga Norén !

Sherlock Holmes

# High profile cases

- Media interest – e.g. underlying narrative and terminology - ‘loners’
- Media speculation associating autism and offending- especially serious offending
- Academic speculation ‘linking autism and mass murder’ (Allely 2018) widely reported – widely condemned
- Is the autism association established – or are we seeing autism traits (AQ) not autism? Or other explanations ?
- What does the research say?

# Prevalence studies

Autism and offending

Author	Population	n	Prevalence
Enayati et al 2008: Sweden	All offenders in Sweden 1997-2001 referred for forensic investigation	2,609	Autism; Male arsonists <b>1.3%</b> Other offenders <b>0.3%</b> Female Arsonists 0 % Female other 1% Asperger Syndrome Male arsonists <b>7.1%</b> Male other <b>2.5%</b> Female arsonists <b>3.4%</b> Other female <b>2.6%</b>
Hare et al 1999: UK	Patients in the three high secure hospitals UK	1,305	<b>2.4%</b> definite ASD <b>2.4%</b> equivocal
Kumagami & Matsura 2009: Japan	All juvenile cases in four family courts in one year	428	<b>3.2%</b> PDD courts A B C <b>18.2%</b> PDD Court D
Robinson et al 2012: UK	Population of 12 prisons in Scotland. 40% prison pop.	2458	Overall prevalence (excluding equivocal cases) <b>4%</b> (screening)
Scragg and Shah 1994 UK	Population of one high secure Hospital	392	<b>1.5.%</b> Asperger Syndrome ( <b>2.3 %</b> inc equivocal cases)
Siponmaa et al 2001: Sweden	YP (15-22 years) forensic psychiatric service over 5 yrs	130	PDD <b>27%</b> PDDNOS <b>17%</b>
Soderstrom et al Soo4. Sweden	Court referrals for psychiatric investigation	100	Autism <b>5%</b> Asperger <b>3%</b> ASD (NOS) <b>10%</b>

Author	Population	n	Prevalence
Allen et al 2008: UK	Adults with AS diagnosis in South Wales	126	26% engaged in offending behaviour
Brookman-Frazee et al 2009: USA	Stratified random sample all children in mh/ drug/ alc/ justice services (6-17 years)	3402	11% screened positive for ASD Fewer in justice than other services
Cheely et al 2012 USA	YP (12 -18) registered in South Carolina Autism and DD monitoring project	609 ASD	Offender rate 5.24%
Hippler et al 2010 : Austria	Archives of Hans Asperger cases (AP)	73 AP 104 AF	Offenders 2.74.% No difference from gen pop
Mourisden et al 2008: Denmark	Follow up PDD cases (1960-1984) 341 PDD (113 childhood autism -86 Atypical Autism 114 AS) 933 no PDD	113 CA 86 AA 114 AS	Offender 0.9% CA (18.9 control) 8.1 % AA (14.7% control) 18.4% AS (19.6% control)
Woodbury-Smith et al 2006: UK	ASD adults in one health district of UK . 102 Final sample 25	102	48% ASD self reported crime 80% comparison group reported crime

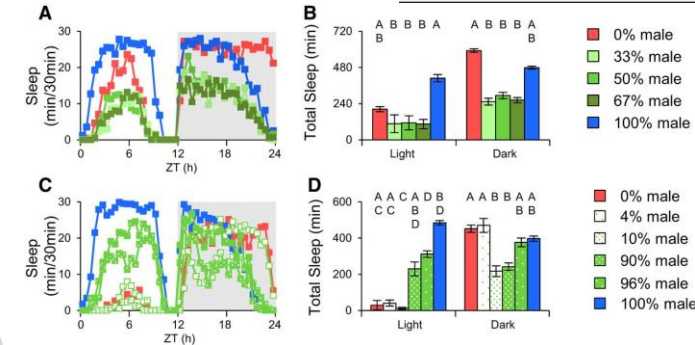

# Other studies

- Mullen et al (2004); Post et al (2014)
  - Stalkers and victims –unclear rates of ASD (AS)
- Tromans et al (2018)
  - Report a general trend suggestive of an increased prevalence of ASD within inpatient psychiatric settings including forensic services
- . McCarthy et al (2016)
  - Neurodevelopmental disorders in prison –high rates of NDD : ASD difficult to detect

## Identified Prevalence of Autism Spectrum Disorder

ADDM Network 2000 – 2012  
Combining Data from All Sites

Surveillance Year	Birth Year	Number of ADDM Sites Reporting	Prevalence per 1,000 Children (Range)	This is about 1 in X children...
2000	1992	6	6.7 (4.5 – 9.9)	1 in 150
2002	1994	14	6.6 (3.3 – 10.6)	1 in 150
2004	1996	8	8.0 (4.6 – 9.8)	1 in 125
2006	1998	11	9.0 (4.2 – 12.1)	1 in 110
2008	2000	14	11.3 (4.8 – 21.2)	1 in 88
2010	2002	11	14.7 (5.7 – 21.9)	1 in 68
2012	2004	11	14.6 (8.2 – 24.6)	1 in 68

# Summary

- Mixed evidence suggests between 2% and 4% of offender population autistic: Few high quality prevalence studies of offending
- Group with severe ID classified as 'challenging behaviour' with health rather than CJS options. Holland et al (2002)
- Weak or limited evidence that some categories of autism spectrum may be at higher risk (Asperger syndrome) Allen et al (2008) but no evidence to support over- representation in serious offending

## What sort of offences ?

- Full picture unknown
- Of the known offender population
  - Low rates of acquisitive offending
  - Mixed evidence on violent and sexual offences
  - Association with specific offences e.g. Stalking, Harassment, Arson, Cyber ...

.....Is this true?

# Cybercrime

- High profile cases –some definite ASD
- Global law enforcement report higher rates of suspected ASD . Ledingham and Mills (2016)
- Follow up study showed high autism traits and high tech skills significant risk factors but not ASD  
Brosnan et al (in press)
- Young age profile (12 -13 yrs plus) – almost exclusively male

# Concerns and speculation

Questions have been asked about over-representation of ASD in specific offences

Offence	Evidence
Cyber dependent offending	
Acquisitive offences (theft and fraud )	
Sexual offences	
Terrorism related	
Stalking and harassment	
Arson	
Violent offences including homicide	

# Concerns and speculation

Questions have been asked about over-representation of ASD in specific offences

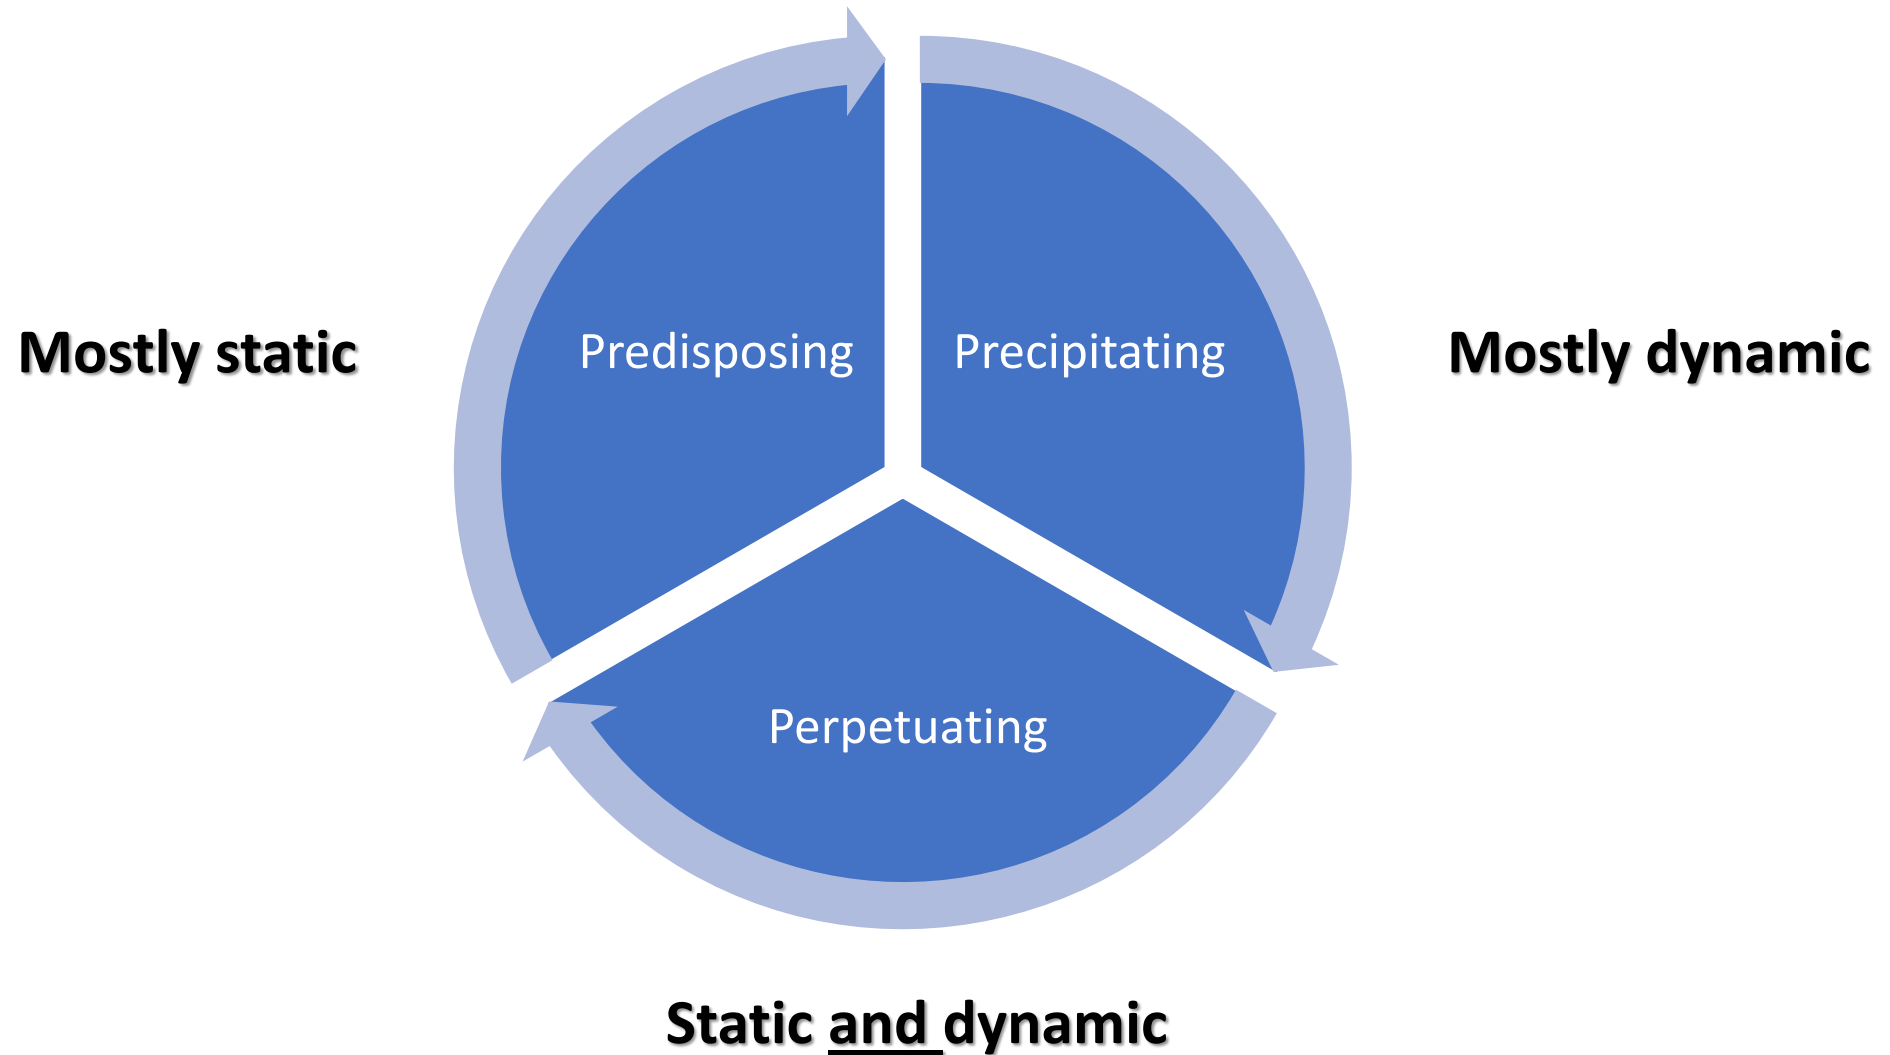

Offence	Evidence
Cyber dependent offending	No evidence
Acquisitive offences (theft and fraud )	No evidence
Sexual offences	No evidence
Terrorism related	No evidence
Stalking and harassment	No evidence
Arson	No evidence
Violent offences including homicide	No evidence

# Risk factors

Inter-relationship of social,  
psychological, psychiatric,  
autism and other factors

# Risk factors

# Predisposing factors

- Cognitive features e.g. 'autistic thinking'  
e.g. Misinterpreting social rules , misunderstanding intentions of others ; unaware of how behaviour seen by others e.g. police may interpret gaze avoidance as suspicious.
- Autistic features :  
e.g. Interests and skills; repetitive routines; sensory processing

# Predisposing factors

- Social factors:
  - e.g. Social isolation, interpersonal conflicts; perceptions of ridicule; bullying; stigma; anxiety
- Co occurring conditions
  - e.g. ADHD, psychosis, other mental health or neurological disorder, drug/alcohol problems

# Precipitating factors

- From case reviews
  - Dislocation from routine/loss
  - Autistic thinking: strong pursuit of interest
  - Perception of slight/ridicule
  - Neurological phenomena, e.g. Tourette's, ADHD
  - Mental health issues, e.g. Psychosis; drug/alcohol , Anxiety/panic
  - Sensory reaction

# Precipitating factors

- From case reviews
  - Bullying
  - Hostility to another (often family member)
  - Political beliefs /causes
  - Unaware behaviour illegal
  - Intellectual interest in the crime and effects
  - Escape from stress or demands

# Perpetuating factors

## From case reviews

- Vulnerability /offending not addressed
- Untreated psychiatric disorder e.g. psychosis, addiction, impulsivity
- Continued exposure to setting conditions (e.g. temptation, special interest, bullying, social isolation)
- Autistic thinking

# Risk and vulnerability

- Related to
  - Social Isolation and community factors  
e.g. affiliation and engagement,  
employment, neighbourhood
  - Psychological factors : cognitive style e.g.  
'autistic thinking', special interests and  
abilities , response to stress and anxiety
  - Other neurological conditions e.g. ADHD,  
seizure disorders

# What is it about autism?

# What is it about autism?

## What is it about autism?

# What is it about autism?

# What is it about autism?

# What is it about autism?

# What is it about autism?

# So what is it about autism?

- 'Autistic thinking'
  - Differences in 'instinctive' social responses
  - Rigidity – literal communication
  - Increased difficulty in understanding other minds :
    - Intentions of others may be misunderstood
    - Judging the thinking of others
    - How 'odd' behaviour interpreted by others
  - Judging context : 'context blindness'
  - Flexibility
  - 'Autistic thinking style' (autism traits) not confined to autism

Judging how behaviour  
may be seen by others

Case example Mr X

# Case study, Mr X 24 years

- Admitted several counts of hacking into Google and Nintendo and developing malware and other related offences. \$2 million damage to Google plus undisclosed damage to Nintendo.
- Second series of offences committed while on bail
- Exceptional coding skills. Diagnosis Asperger Syndrome
- Lost employment as a result of offences –lives with parents
- Pleaded guilty and appeared in Crown Court March 2019
- **Sentence ?**
