Forskningsprojekt

Sjukfrånvaromönster vid multipel skleros; MS

Sedan flera år driver vi ett tvärvetenskapligt forskningsprojekt om MS och sjukfrånvaro.

Idag har cirka 18 000 personer i Sverige sjukdomen multipel skleros (MS). MS är den vanligaste degenerativa neurologiska sjukdomen bland unga vuxna och debuterar oftast i 20- till 40-årsåldern, åldrar då aktiviteten på arbetsmarknaden vanligen är hög. MS är en synnerligen heterogen sjukdom som och kan påverka individer i olika grad och på olika sätt samt ha ett vitt skiftande förlopp. För många innebär sjukdomen efter hand olika typer av funktionsnedsättning, med en reducerad arbetsförmåga som följd. Dock är kunskapen om yrkesarbete och sjukfrånvaromönster vid MS högst begränsad.

Det övergripande *syftet* med projektet är att, för personer med MS a) kartlägga mönster av yrkesarbete och sjukfrånvaro och sjuk- eller aktivitetsersättning, b) identifiera faktorer som påverkar möjligheterna för yrkesarbete, samt sjukfrånvaro och sjuk- eller aktivitetsersättning. Flera olika delstudier görs utifrån dessa frågeställningar.

Projektgrupp

Emilie Friberg	<i>Projektledare</i> , Forskare, PhD
Kristina Alexanderson	<i>Bitr projektledare</i> , professor, PhD
Katharina Fink	Neurolog, PhD
Hanna Gyllensten	PhD
Jan Hillert	Neurolog, professor, PhD
Korinna Karampampa	PhD
Chantelle Murley	MSc, doktorand
Veronica Svärd	PhD, Postdoc
Petter Tinghög	PhD
Agneta Wennman-Larsen	Docent, PhD

Projektet finansieras bl.a. av Biogen, Celgene, Forskningsrådet för hälsa, arbetsliv och välfärd (Forte) och Försäkringskassan.

Publikationer

Doktorsavhandling

Wiberg M. Development of income following sickness absence from the workplace or long-term unemployment, and among individuals with Multiple Sclerosis. Karolinska Institutet, Division of Insurance Medicine 2017.
