Institutet**

## **WE CONTRIBUTE TO THE DEVELOPMENT OF FUTURE NURSING**

Our vision is to contribute to people's health through research, education and interprofessional collaboration in nursing based on scientific evidence.

The education is based on campus as well as distance learning for all the programs in nursing on bachelor, master, and doctoral levels. Our education has a strong research link and an interprofessional profile. The division has an extensive international student exchange.

Our activities are founded in knowledge that supports health, alleviates suffering, increases participation and provides fundamental care needs. Person-centered care and collaboration with other health care professionals is crucial as well as our collaboration with the clinical setting.

Inspiring learning environments.

Brooch ceremony for the newly graduated nurses.

Theses.

## THE DIVISION IN FIGURES

1400 students/year  
100 employees

Turnover of 100 MSEK/year

100 scientific publications/year

## OUR RESEARCH PROFILE

The aim of our research is to contribute to evidence based guidelines and new practices, from the patient's perspective, problems and needs. Research contributes to the theoretical development of nursing and enhanced quality of safe and participatory care.

## IN THE INTERNATIONAL FOREFRONT

In the international and highly respected QS-ranking 2016 nursing at Karolinska Institutet was ranked number one in Europe and number five in the World. The ranking implies a good reputation and high quality of our research.

## COLLABORATION WITH THE HEALTH CARE SECTOR

Parts of the programs consist of integrated practice learning in collaboration with the Stockholm County Council and the municipalities. A large proportion of our research is carried out in close collaboration with the clinical setting. Nurses educated at Karolinska Institutet are in high demand by the health care setting.

## DEPARTMENT OF NEUROBIOLOGY, CARE SCIENCES AND SOCIETY

NVS 's vision is to significantly improve human health through education and research within the department 's profile areas.

This means, among other things, pioneering and internationally leading research within dementia and epidemiology, and research integrated education within nursing, physiotherapy and occupational therapy.

The art of our business is translational – our work and dedication extends from cell to society. The department also has a leading role in developing academic competence within the health care system in primary care, geriatric medicine and rehabilitation, this in close collaboration with the Stockholm County Council.
