

Chemical Approaches to Metabolic Diseases

Pere Puigserver, Ph.D.

Dr. Puigserver is Professor of Cell Biology at Harvard Medical School. His laboratory is based in the Department of Cancer Biology at Dana-Farber Cancer Institute.

The Puigserver Laboratory investigates broad aspects of fundamental metabolic and energetic processes in mammals that are necessary for cell survival and specific biological function. His research is focused on the molecular mechanisms by which mammalian cells sense, communicate, and respond to nutrients.

Date: Monday February 6th at 14:00

Place: Nobel Forum, Nobels väg 1.

Host: Jorge Ruas, Dept. of Physiology and Pharmacology.
